

PRISMFALL

Concept: a falling-block puzzle game in the classic tradition. Gem-studded pieces, a charge-and-release **Prism Burst** and permanent upgrades turn each run into a short, juicy chase for one more record.

Platform: Windows PC, offline HTML5 canvas (index.html + assets/). Input: keyboard, mouse, gamepad. Target session: 2–8 minutes. Version 1.0 · 2 Oct 2026

CORE LOOP (SECONDS)

1. A piece spawns (7-bag randomiser). You see the next 5 and can **hold** one.
2. Move, rotate (SRS wall kicks, 180° spin) and drop. A ghost shows the landing spot.
3. Full rows clear. Quads, T-spins, combos and back-to-back clears score more.
4. Every clear charges the **Prism meter**. When it is full, **Burst** wipes the bottom 4 rows and starts **Fever** (×2 score for 8 s). Use it as a panic button or a score multiplier.
5. Gems sitting in cleared rows fly into your pocket.

RUN LOOP (MINUTES) & WIN/LOSE

- **Lose:** the stack reaches the spawn zone (top-out / lock-out).
- **Marathon (win):** survive 150 lines. Speed rises every 10 lines.
- **Sprint 40 (win):** clear 40 lines. The score is your time.
- **Daily Bloom:** 3-minute score attack. Everyone gets the same seeded piece order that day.
- **Zen Garden:** no game over and slow speed. A relaxed way to farm gems.
- After each run, the results screen shows shards, XP, bests and achievements. **Enter** restarts in under 2 s.

PROGRESSION HOOK 1: GEMS → WORKSHOP

About 10% of pieces carry a gem mine. Cleared gems, plus a score bonus, become **shards**. Shards buy 6 permanent perks, 13 levels in total: Prism Lens (faster charge), Gem Magnet, Wide Beam (bigger Burst), Fever Fuel, Steady Hands (longer lock delay) and Second Wind (survive one top-out). Each perk changes how you play, not only your numbers.

PROGRESSION HOOK 2: PLAYER LEVEL → THEMES

Each line cleared is 1 XP. Player levels unlock 5 extra visual themes: Candy Shop, Sea Glass, Citrus Grove, Lavender Field and the animated Prism. The title screen always shows the next unlock and how many lines it needs, so every run moves you forward.

PROGRESSION HOOK 3: RECORDS, DAILY, ACHIEVEMENTS

Personal bests for each mode, a daily seed with today's and all-time bests, and 15 achievements (Quadrant, Triple Axel, Clean Slate...). Each achievement pays shards, which feeds back into hook 1.

FIRST 60 SECONDS

On the title screen, Play is pre-focused, so **Enter** starts a run. READY-SET takes 1.5 s. First-run hints teach move, drop, hold and Burst one at a time and disappear once used. The first run has a 25% gem chance, so shards arrive right away. Music adds layers as level and combo rise.

ART DIRECTION: LIGHT, SOFT, TACTILE

One style reference for every asset: a rounded "candy-paper" tile. It has a top-lit vertical gradient, a glossy upper band, a thin darker rim, a shine dot and faint paper speckle. Gems are faceted diamonds with white edges. Backgrounds are pale paper gradients with a dot grid and drifting translucent shapes. Fever adds a moving pastel rainbow wash. UI is **light theme only**: white cards, soft shadows, rounded corners and one theme-tinted accent colour. Morning Paper palette: 

Juice: row-collapse flash, coloured debris, hard-drop streaks, screen shake (can be turned off), pop-in callouts, gems that home into the counter, a danger glow near the top, and a lock-delay brightening on the active piece.

AUDIO (WEB AUDIO, ALL SYNTHESIZED)

About 25 SFX built from oscillators, filtered noise and envelopes. Line-clear chords rise one semitone per combo step. The original 4-bar music loop (D–A–Bm–G) is a step sequencer. It adds bass, drums and a lead as level, combo and Fever rise, and speeds up with level. No audio files and no audio plugin.

CONTROLS & ACCESSIBILITY

Arrows/Space/Z/X/C/V, **plus a left-handed cluster** (A/D/W/S, J/K/L, I, O) that is always active. Mouse: hover a column to aim, click to drop, right-click or wheel to rotate. A standard gamepad works too. DAS, ARR, soft-drop speed, ghost, shake and volumes are adjustable. The game auto-pauses when the window loses focus.

Tooling notes and assumptions. SpriteCook, Mojulo and Browser Use were requested but were **not connected** in this build session; tool search found none of them. All art is therefore procedural canvas code (assets/art.js) that follows the single style reference above. It was exported to PNGs for the manifest, and 0 SpriteCook credits were spent. Mojulo was not needed because the game is 2D. Playtesting used headless Chromium driven by Playwright, not Browser Use. The game is an original work: it uses no third-party names, logos, music or art.
