

Prismfall: Playtest Report

Test run 2026-10-02 19:08 UTC · Chromium 141.0.7390.37 (headless, Playwright) · viewport 1366x768 plus 3 extra resolutions · harness tools/playtest.mjs

How this was tested (read first). The Browser Use tool was **not connected** in this session, so I playtested with Playwright driving headless Chromium on the Linux build machine. The input was real: keyboard events, mouse moves and clicks, and a **mocked** standard gamepad. A heuristic AI bot played the runs; it reads the board through a read-only debug hook and plays through those same inputs. Everything below marked PASS was actually executed. Anything not executed is listed as an **assumption** under Known remaining issues. Nothing was tested on a Windows machine.

AUTOMATED CHECKS 33 / 33	FULL RUNS 7	INPUT → FRAME (MEDIAN) 7.0 ms	AVG FPS (LOWEST SAMPLE) 50.7	RUNTIME ERRORS 0
------------------------------------	-----------------------	---	--	----------------------------

FULL RUNS

#	RUN (INPUT METHOD)	ENDED	SCORE	LINEs	LVL	TIME	PIECES	BURSTS	GEMS
1	Marathon (fresh save, strong bot, human pace ~2 pieces/s)	LOCK OUT	231,708	145	15	3:14.6	456	10	106
2	Sprint 40 (strong bot, keyboard)	FINISH!	11,584	40	1	0:17.3	110	19	12
3	Daily Bloom (left-handed keys A/D/W/J/K/L/I/O, human pace)	TIME'S UP	137,248	112	12	3:00.0	323	8	26
4	Marathon (novice bot: heavy random noise)	TOP OUT	7,364	17	2	0:08.9	89	10	6
5	Marathon retry, hard-drop spam until top-out	LOCK OUT	234	0	1	0:00.4	—	—	0
6	Zen Garden, mouse only (hover aim, right-click rotate, click drop)	game	—	38	4	0:25.1	120	18	12
7	Marathon, gamepad only (mocked standard-mapping pad)	game	—	12	2	0:22.7	40	6	3

Runs 1–5 played to a real end: a win, a time-up, a top-out or a lock-out. Run 6 (Zen, which never ends by design, so I quit from the pause menu) and Run 7 (gamepad) were capped at 120 and 40 pieces to verify those input paths. The bot plays at machine speed, so its Sprint time is far beyond human play, but its lines, levels and end states are real.

FOCUS CHECKS

AREA	RESULT
Input lag	Measured from the input event timestamp to the end of the frame that drew the result, over 500 inputs: median 7.0 ms , p95 17.9 ms, max 39.8 ms. Moves and rotations apply inside the keydown handler, so they show on the very next frame. DAS/ARR are frame-independent. <i>The display and compositor latency of a real monitor isn't included.</i>
Collisions	An invariant runs every frame: the active piece may never overlap the stack or walls. It was never violated across all runs and 3000 random key events, including 20% long key holds that exercise DAS. Separate rule tests covered SRS kicks, the T-spin 3-corner rule, perfect clears, Burst row removal, the lock-delay reset cap and hold-once.
Softlocks	Checked: the stall detector (piece counter must advance), the auto-pause on window blur releasing held keys, Esc/Start pause and resume, the Enter retry loop, Space-mash at game over, Zen top-out rescue, the Second Wind rescue, and the escape path back to the title after fuzzing. No softlock found.
Frame rate	Average 59.5 fps across 34 samples (lowest sample 50.7). The worst single frame was 50 ms. These numbers come from headless Chromium using software rendering (SwiftShader) while a bot polled it, so a real GPU should match or beat them. <i>Assumption: not measured on your hardware.</i>
First 60 seconds	Title → Enter → playable in about 1.5 s (READY/SET countdown). In Run 1 (fresh save): first line clear at 3.8 s, first gem collected at 3.8 s, first Prism Burst at 14.6 s. Bot timings are faster than a human's. Hints teach one control at a time. <i>Whether it's fun is my subjective judgement from watching the runs and screenshots. No human tested it.</i>

BUGS FOUND AND FIXED

ID	SEV.	FOUND BY	PROBLEM	FIX	STATUS
B1	Medium	Screenshot review (title)	The PRISMFALL logo was clipped by the title card: the last letters ran off the edge at 1366x768.	Smaller clamp() font size, tighter letter-spacing and white-space: nowrap.	Fixed, re-tested
B2	Low	Screenshot review (gameplay)	The Prism meter track overlapped the right border of the well.	Moved the meter 0.36 cells clear of the well and the Next panel 0.95 cells out.	Fixed, re-tested
B3	Medium	Playtest screenshot during Prism Burst	Simultaneous callouts drew on top of each other and were unreadable (e.g. 'FEVER x2' over 'SINGLE').	Callouts now take free vertical lanes: a new text steps below any active text it would overlap. First fix was incomplete (older callouts drift upward); lanes now use each callout's current position.	Fixed, re-tested
B4	Medium	Playtest screenshot (first seconds, 1366x768)	The first-run tutorial hint bar covered the bottom row of the well on 768 px tall screens.	The hint sits under the well when there is room, otherwise in the empty upper well.	Fixed, re-tested
B5	High	Code review before playtest; then a dedicated test	Mashing Space or Enter at the moment of game over could press 'Play again' and skip the results screen (lost feedback, accidental restart).	Results buttons ignore input for 700 ms after appearing; other screens for 120 ms.	Fixed, re-tested
B6	Low	Code review	Opening Controls from the Pause menu hid the paused board behind the attract animation.	The board renders whenever a run is paused, whichever menu is open.	Fixed, re-tested
B7	Low	Code review	The results screen was silent because the music stopped at game over and never resumed.	The results screen starts the menu music.	Fixed, re-tested
B8	Low	Exported art review	The bottom row of the app icon spilled outside its rounded card.	Re-laid out the icon tiles inside the card and re-exported all icon sizes.	Fixed, re-tested
B9	High	Launcher test (curl + Playwright against the Linux build)	Prismfall.exe opened /index.html?launcher=1. Go's file server redirects that to / and drops the query, so the heartbeat never started and the launcher would stop serving 3 minutes into play (a reload would then fail).	The launcher opens /?launcher=1 directly. Verified: HTTP 200, game boots, heartbeat pings arrive.	Fixed, re-tested
B12	Medium	Visual re-test of B3 (scripted burst right after a clear)	Prism Burst or Hold pressed during the 0.3 s line-clear animation was silently ignored. It felt like a dropped input exactly when players reach for Burst.	Burst and Hold pressed mid-clear are buffered and applied as soon as the clear finishes. A regression check was added to the harness.	Fixed, re-tested
B10	Info	Run 3 (first pass)	At machine speed (~6.7 pieces/s) the bot cleared ~260 lines and reached 20G in Daily Bloom. It topped out at 1:38 instead of reaching the 3:00 limit. The game behaved correctly; the test expectation was wrong.	Test change only: Runs 1 and 3 now pace the bot at human speed, which also makes the first-60-seconds observation realistic.	Not a game bug
B11	Info	Harness	Four failures in the first passes came from the test script (navigation from a non-title screen, a run cap that stopped before game over, a Second Wind test that kept dropping after the rescue, and not waiting for the game-over animation).	Harness fixed (toTitle helper, higher caps, stop at rescue). No game code changed for these.	Not a game bug

KNOWN REMAINING ISSUES & ASSUMPTIONS

- Not tested on Windows:** All testing ran on Linux in headless Chromium. Assumption: Edge/Chrome on Windows behave the same, since the game uses standard canvas, Web Audio and localStorage only. Fonts will differ (Segoe UI on Windows vs DejaVu in these screenshots).

- **.bat launcher:** Not executed (no Windows here). It's a two-line script: start "" "%~dp0index.html". Assumption: it opens the default browser on Windows 10/11.
- **Prismfall.exe:** Cross-compiled for Windows x64 (PE32+ GUI, icon embedded). The same Go source was run as a Linux build and verified to serve the game, answer heartbeats and exit cleanly when a second copy starts. The .exe itself was never run on Windows. It isn't code-signed, so SmartScreen may warn.
- **Separate saves:** Browsers store progress per address, so the .bat/index.html (file://) and the .exe (http://127.0.0.1:47613) keep separate progress. This is documented in README.txt.
- **Audio:** Verified programmatically: the engine starts on the first click or key, all 22 SFX and both music modes run with no errors, and the sequencer advances. Assumption: the mix sounds good. It was never listened to; a headless browser has no speakers.
- **Gamepad:** Tested with a mocked standard-mapping pad (navigator.getGamepads override), not a physical controller. Assumption: Xbox and PlayStation pads using the standard mapping behave the same.
- **Frame rate:** Measured in headless Chromium with software rendering. Assumption: a desktop GPU is at least as smooth. Not measured on your machine.
- **Fun:** The first-60-seconds judgement is my own assessment from watching bot runs and screenshots. No human has played it yet. Balance values (gem rate, perk costs, Burst size) are first-pass estimates.
- **Bot skill:** The bot never uses T-spins and plays at machine precision. T-spin scoring was verified with a scripted setup instead (T-spin double = 1200).
- **Missing SpriteCook art:** All art is procedural placeholder art because SpriteCook wasn't connected. The full list of missing assets is in docs/ASSET_MANIFEST.md.
- **Browser Use:** Not available. The playtest used Playwright + headless Chromium instead (real input events, real browser engine).

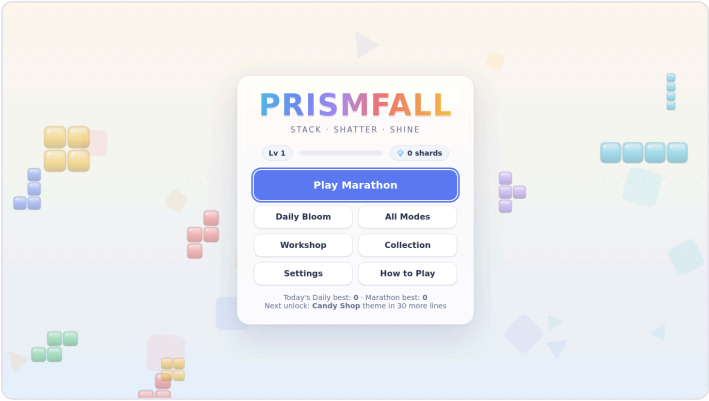

ALL AUTOMATED CHECKS (FINAL RUN)

RESULT	CHECK	DETAIL
PASS	Game boots from file:// with no errors	screen=title
PASS	Enter on title starts Marathon (keyboard-only start)	
PASS	Sprint ends at 40 lines with a FINISH result	40 lines, 17.3s
PASS	Daily Bloom ends at the 3:00 time limit	180.00s
PASS	Left-handed key cluster can play a full run	323 pieces
PASS	Prism Burst fired at least once in Daily run	8 bursts
PASS	Daily Bloom piece order is identical across runs on the same day	SZLIJO vs SZLIJO
PASS	Esc pauses the game	
PASS	Esc resumes the game	
PASS	Window blur auto-pauses and releases held keys (no stuck auto-shift)	
PASS	Novice run reaches a TOP OUT game over and the results screen	TOP OUT
PASS	Enter on results restarts instantly (retry loop)	
PASS	Hard-drop spam ends in game over without errors, results reachable	LOCK OUT
PASS	Space mashed during game over did not skip the results screen	
PASS	Zen never ends: top-out triggers "Fresh Soil" rescue instead of game over	state=play
PASS	Gamepad A button starts a game from the title menu	
PASS	Gamepad Start pauses	
PASS	Gamepad Start resumes	
PASS	T-spin double detected and scored 1200 at level 1	delta=1200 bottom=...#.

PASS	Perfect clear awards +3000 and empties the board	delta=3338
PASS	Prism Burst removes 4 bottom rows, collects gems, starts Fever, empties meter	{"gems":1,"fever":7.9,"filledRows":2,"prism":0}
PASS	Prism Burst pressed during a line-clear animation is buffered and fires right after	pressedMidClear=true {"fever":7.750000000000001,"prism":0}
PASS	Hold swaps once, second press is refused until the next piece	held=1 cur=L
PASS	Lock delay is capped (no infinite stalling by wiggling)	pieces 3 -> 4
PASS	Second Wind perk survives the first top-out	{"used":true,"state":"play","topRowsEmpty":true}
PASS	Fuzz: 3000 random key events, active piece never overlapped the stack or walls	violations=0
PASS	Fuzz: no runtime exceptions in the game loop	
PASS	After fuzzing (left on "game"), Esc/Quit returns to the title and a new game starts (no softlock)	
PASS	Buying a perk spends shards and raises the perk level	552 -> 532 {"lens":1,"magnet":0,"wide":0,"fever":0,"steady":0,"wind":0}
PASS	Progress (runs, shards, bests) persists in localStorage across reload	{"runs":8,"shards":532,"best":231708}
PASS	Layout fits 1024x600 (cell 25px)	{"lx":235,"right":793,"top":73,"bottom":573}
PASS	Layout fits 1920x1080 (cell 46px)	{"lx":449,"right":1478,"top":121,"bottom":1041}
PASS	Layout fits 800x600 (cell 25px)	{"lx":123,"right":681,"top":73,"bottom":573}

No page errors or console errors were logged during the final run.

SCREENSHOTS (FINAL RUN)

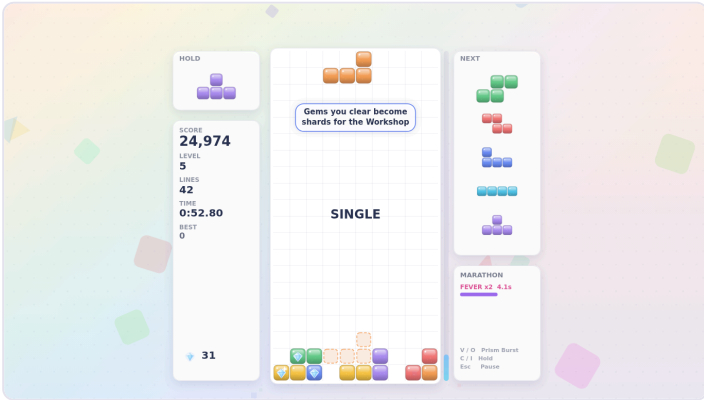

Title screen, fresh save (light theme)

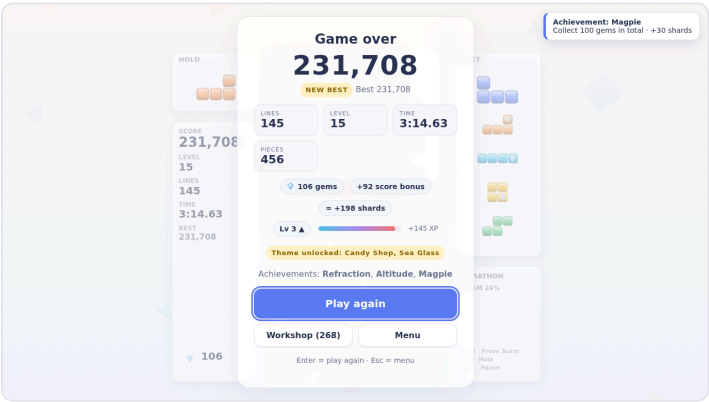

First seconds of a first run: tutorial hint bar under the well

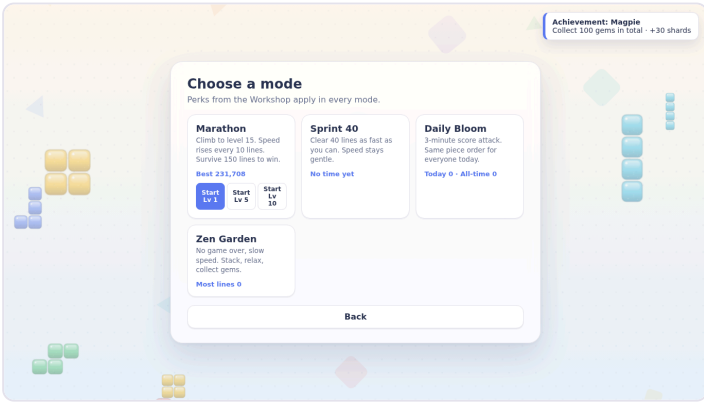

Marathon about 25 pieces in: gems in the stack, ghost piece, Prism meter filling

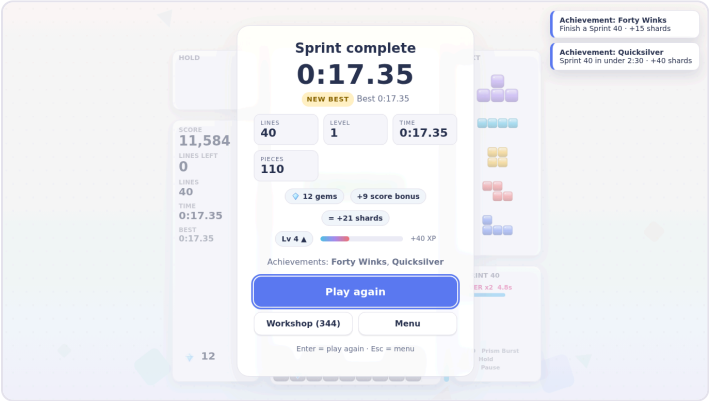

Marathon mid-run

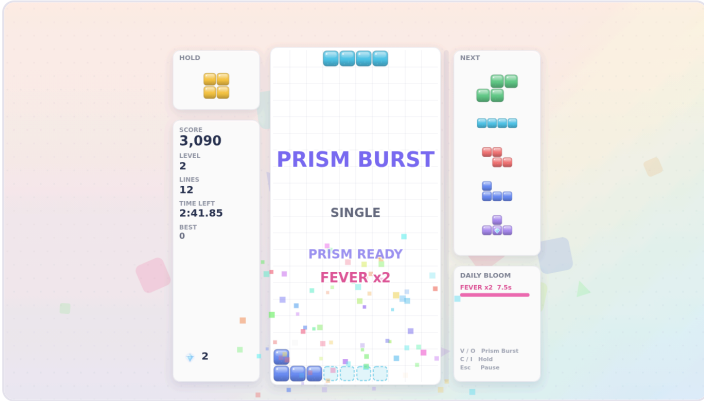

Results screen after Run 1 (shards, XP bar, achievements)

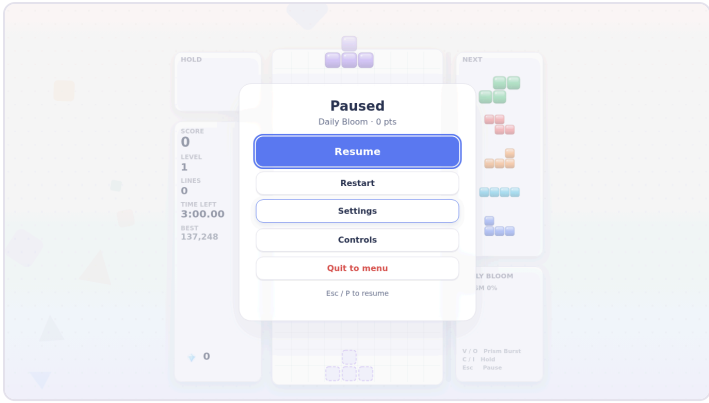

Mode select

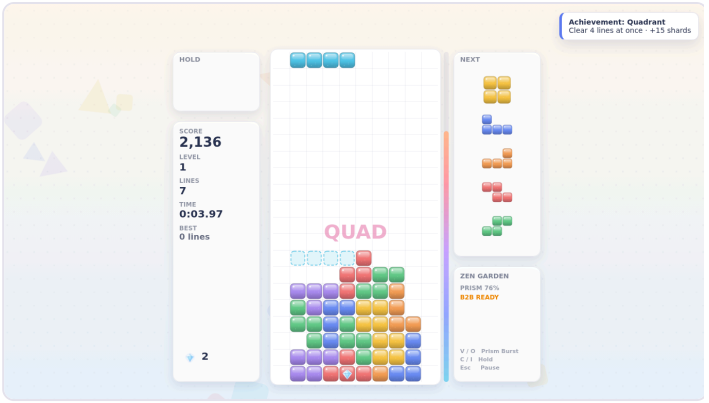

Sprint 40 results

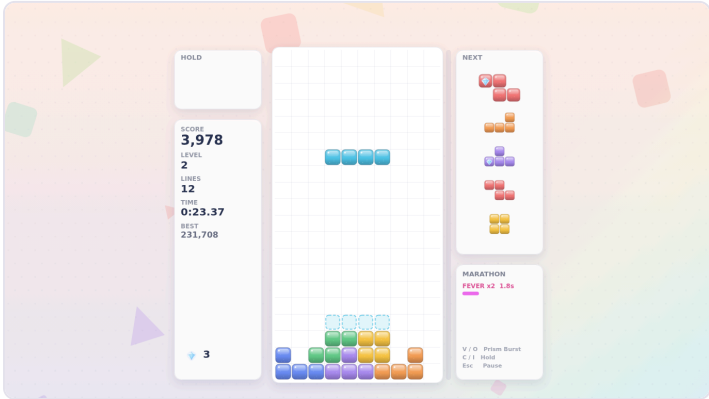

Prism Burst just fired: rainbow Fever x2 overlay

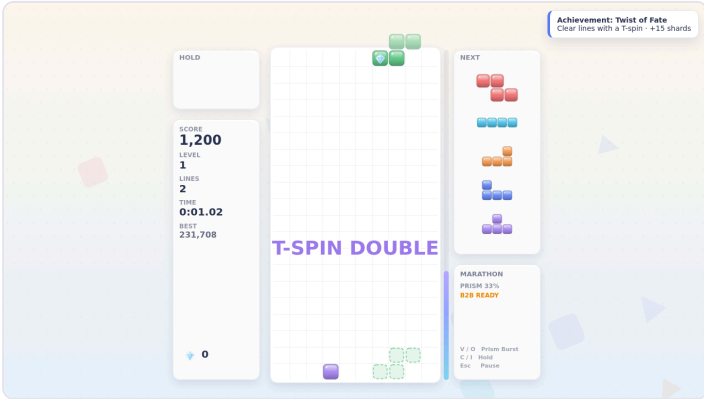

Pause menu

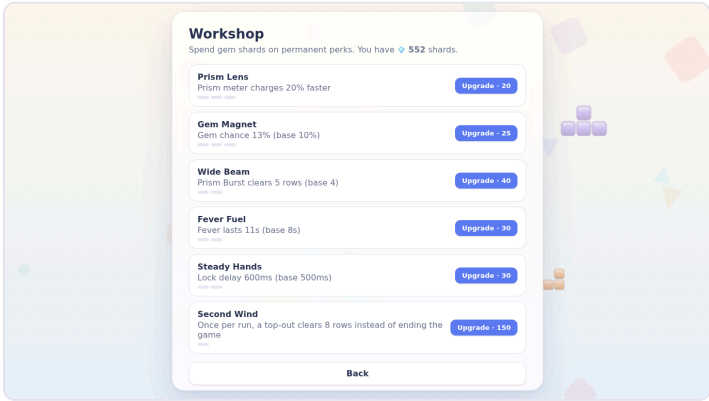

Zen Garden played with the mouse only

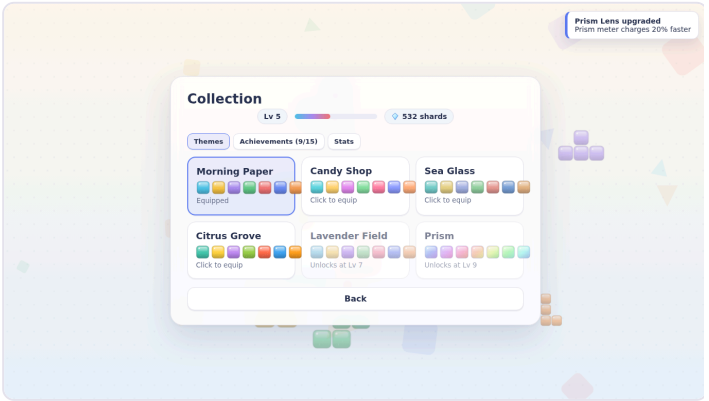

Marathon driven by the (mocked) gamepad

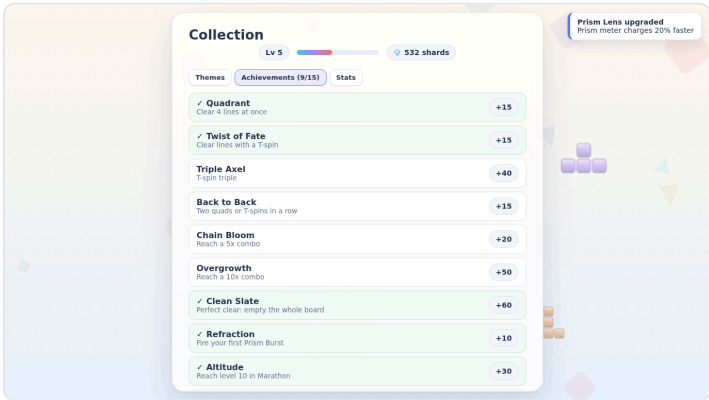

T-SPIN DOUBLE callout after a scripted T-spin

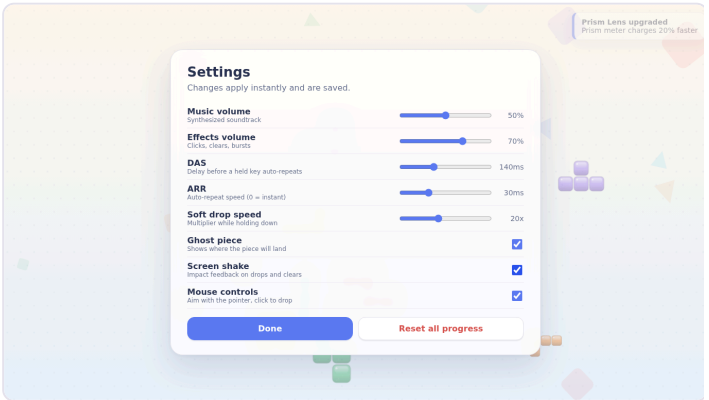

Workshop with shards earned from the test runs

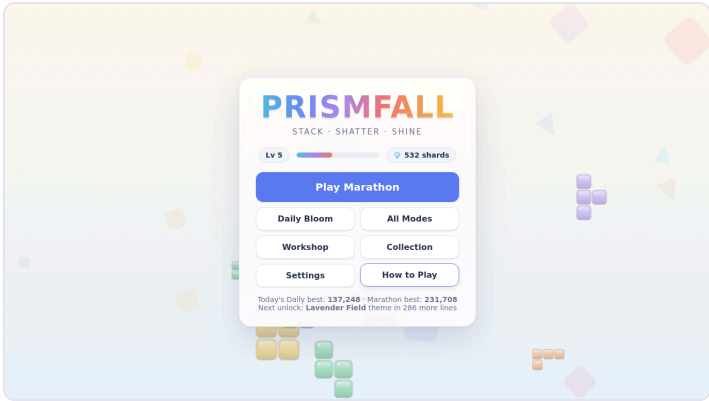

Collection: themes unlocked by player level

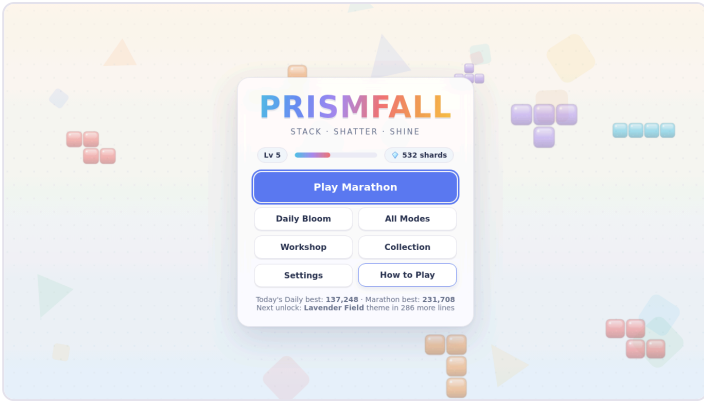

Collection: achievements

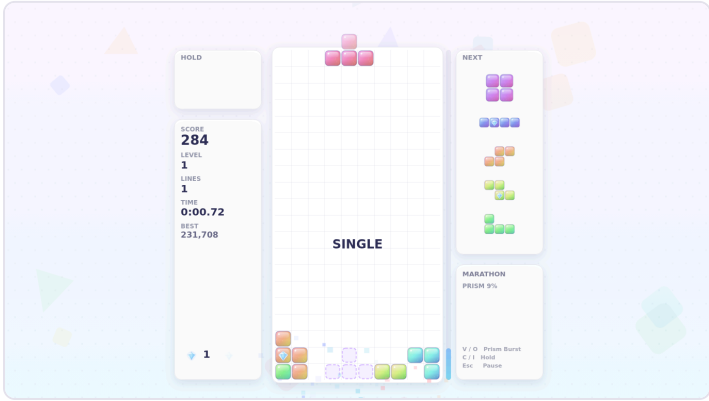

Settings (DAS/ARR, soft drop, volume, toggles)

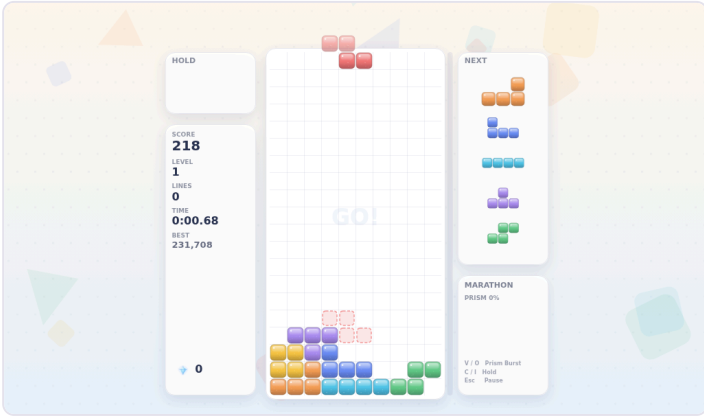

How to Play, including the left-handed key cluster

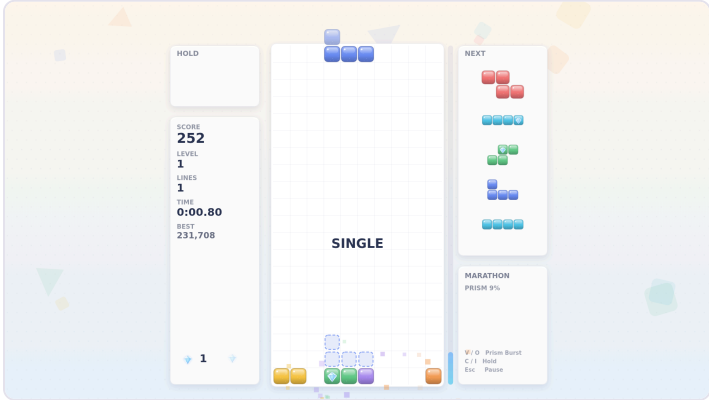

Title screen for a returning player (level, shards, bests)

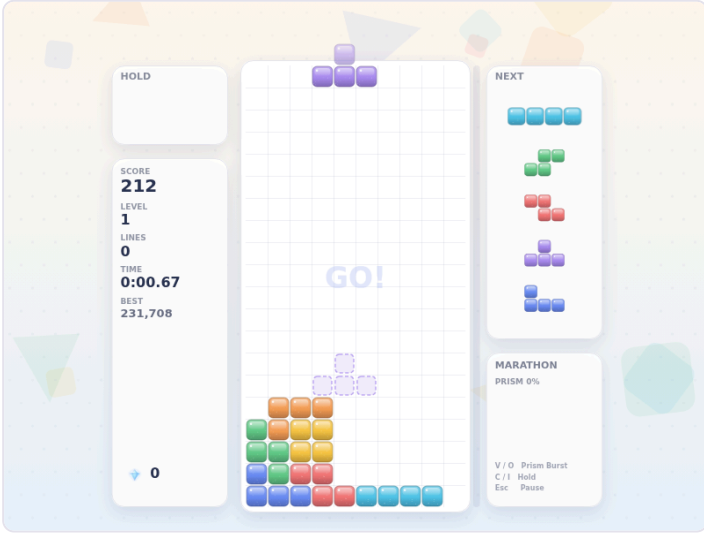

Prism theme (unlocks at player level 9)

Gameplay at 1024x600

Gameplay at 1920x1080

Gameplay at 800x600
